Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

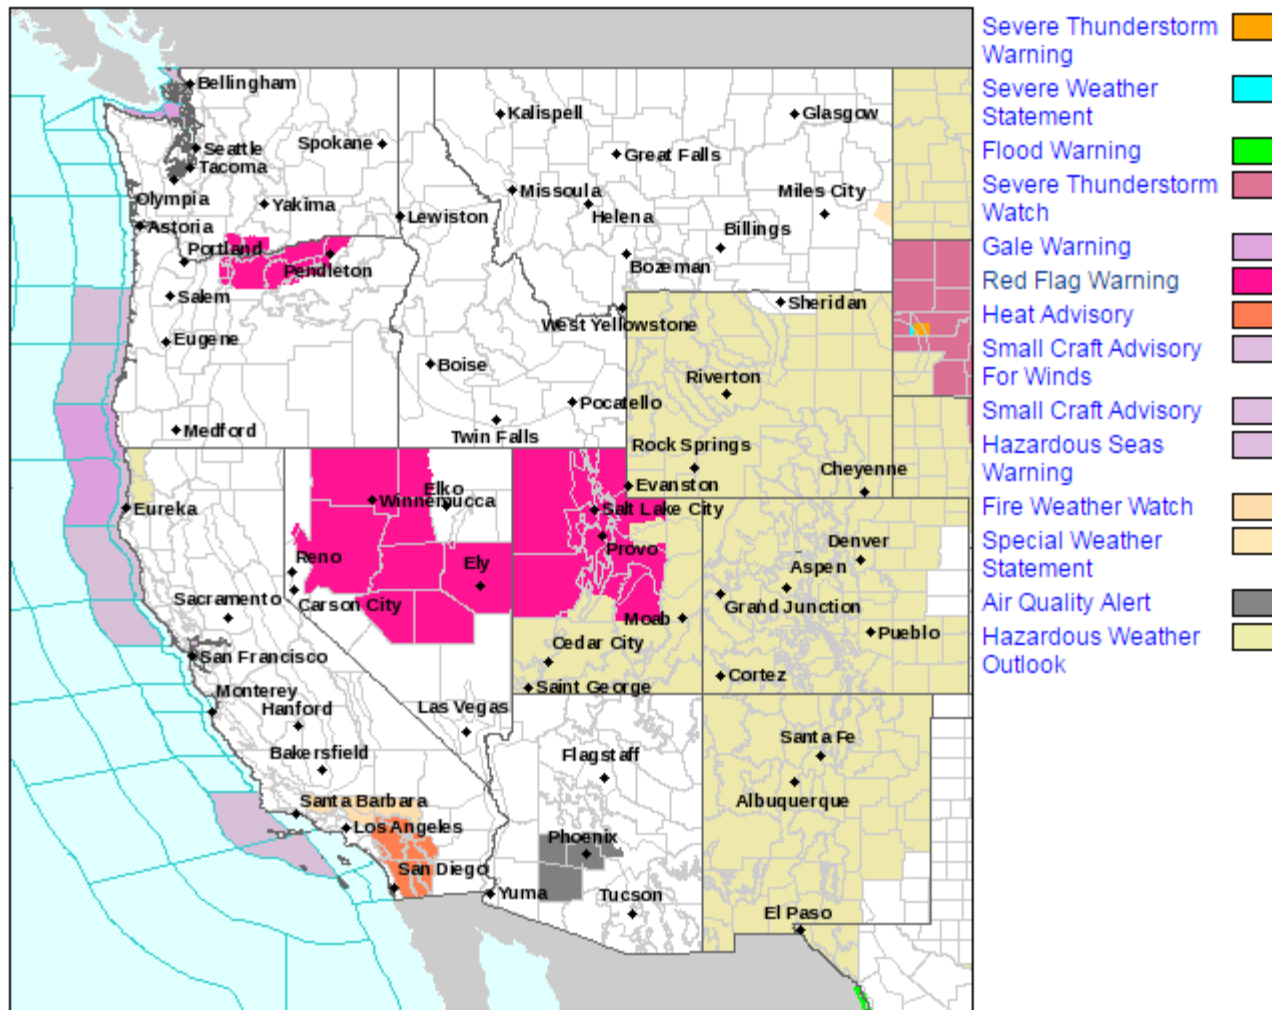

Isolated Afternoon/Evening Thunderstorms Siskiyou and Western Modoc Counties Today. NE Winds Gusting to 20-30 mph and Very Dry Over the Mountains of Far NW CA Tonight-Friday. Isolated Afternoon/Evening Thunderstorms Northern Areas Monday-Tuesday, Becoming More Numerous Over All Higher Terrain Wednesday-Sunday. A small-scale Pacific low pressure trough is moving toward the North Coast today. It is expected to move onshore late today and continue moving east across the northern tier of the Northern California region this evening and overnight. Isolated thunderstorms are expected to accompany the trough in Western Siskiyou County this afternoon, and spread into eastern Siskiyou and Modoc Counties this evening and into the overnight hours. Afternoon winds over the higher terrain and east of the Cascade-Sierra crest will gust to near 30 mph today. Temperatures will cool back to just a few degrees above normal. RH in inland areas will continue around 8-18%, with RH recovery to only 30-45% on mid and upper slopes. The marine layer is only about 1000 ft deep and only areas along the immediate coast and in the Sacramento Delta will see the effects of the cool marine air and the afternoon sea breeze today. Northeast winds are expected to develop over the mountains in far NW CA later today and continue on and off through Friday. These winds will peak early Wednesday with gusts to near 30 mph. This pattern produces very dry conditions in far NW CA and fire potential will be elevated for just the mid and upper slopes of the mountains in far NW CA. More weak low pressure troughs and disturbances will move across the far northern end of the state early in the week, producing slight chances of afternoon and evening thunderstorms there. On Wednesday a low pressure center will begin to develop near the Central Coast and it is expected to remain there through next weekend. This low has the potential to draw in more moist unstable air and produce scattered showers and thunderstorms over the mountains late Wednesday into next weekend.

SOUTHERN CALIFORNIA

Hot and very dry conditions will continue through Monday as strong high pressure sits off the California Coast. Maximum temperatures will be around 10 degrees above normal, with upper 80s and 90s across the mountains and upper 90s to 108 in the valleys. Minimum humidity will be mainly in the single digits and teens away from the coastal areas. The high pressure area will get pushed further offshore as a weak trough drops down the West Coast bringing a slow cooling trend Tuesday and Wednesday. There will be south to southwest afternoon winds of 15 to 25 mph with gusts to 40 mph across the Owens Valley, Kern County Mountains, and the north sides of the Angeles and San Bernardino National Forests Monday through Wednesday. The trough will break off from the main flow and a weak area of low pressure will form off of Point Conception Thursday and then remain nearly stationary through next weekend. This low pressure area will bring near normal temperatures to the area Thursday through next weekend. Minimum humidity will remain mainly in the single digits and teens away from the coastal areas through Thursday before increasing to between 15% and 30% Friday through next weekend. Isolated afternoon showers and thunderstorms will form mainly over the Sierra Friday through next weekend.
